Invite you to attend

PRECAST ARCHITECTURAL CONCRETE

A dinner seminar presented by

Mr. Bruce Taylor

Short on time? Short on masons? Precast Architectural Concrete loadbearing walls may be your solution. As a result of today's slow decision process, accelerated construction schedules and shortage of labour, the precast concrete industry has taken a page from what is "old and proven", and re-introduced load bearing wall assemblies with precast concrete floor elements.

Are joints and sealants the Achilles heel of architectural precast concrete wall systems? Included will be a brief overview of the industry's latest publication dealing with making precast walls a high performance, weather-tight building envelope.

Mr. Taylor is a senior executive with the Res Group of Companies, comprised of two high-rise formwork divisions, a masonry division and a precast concrete division. Bruce mentors, coaches, and provides visionary leadership to his company's next generation of construction professionals.

Architects, owners, technologists, engineers, contractors, and facility managers will want to attend this informative presentation.

REGISTRATION

Please RSVP by Faxing Back this page before
Monday March 27, 2006 to
Fax: (519) 578-2041

Names _____

Company: _____

Phone: _____
